EDUCATION

- **Manipal Institute of Technology, Manipal** Udupi, India
Bachelor of Technology - Computer and Communication Engineering 2022 -2026
CGPA: 7.1
Relevant Courses: Data Structures, Object Oriented Programming, Artificial Intelligence, Machine Learning, Cloud Technology, Operating Systems, Principles of Data Communication, Computer Networks and Protocols, Embedded System Design, Database Management Systems, Information Security, Foundations of IoT
- **Presidency School Bangalore South** Bangalore, India
Secured 9.2 CGPA in 10th and 8.94 CGPA in 12th PCMC. 2008-2022

SKILLS SUMMARY

- **Languages:** Python, C, Java, SQL, JavaScript
- **Machine Learning & Data Science:** Pandas, NumPy, Scikit-learn, TensorFlow, Keras, Matplotlib
- **Frameworks & Tools:** Robot Framework, Selenium, Git, Postman, Typer, REST APIs
- **Cloud & DevOps:** AWS, GitHub
- **Web & App Development:** HTML5, CSS3, JavaScript, React, Android Studio
- **Databases:** MySQL
- **Operating Systems:** Windows, Linux (WSL)

EXPERIENCE

- **Siemens Technology and Services Pvt. Ltd - Technical Intern:** Jan 2026 - Present
 - Currently working as part of FT D AA IN DASS team, contributing to testing of the Siemens Notifier Application, focusing on API validation and end-to-end automation of real-time notification and alarm workflows in an industrial HMI platform.
 - Automated 50+ API and end-to-end test cases using Robot Framework and Python, improving test coverage of critical workflows by 40% and ensuring reliable validation of alarm, notification, and escalation logic.
 - Developed a custom Python-based API testing tool to execute chained API calls with dynamic inputs, reducing manual testing effort by 60% and significantly speeding up validation cycles.
 - Engineered AI-driven agents and sub-agents to assist in test case generation, debugging, and optimization, reducing test development time by 30 to 40% and enhancing automation efficiency.
 - Contributed to Agile sprint cycles, collaborated on debugging and test improvements, and helped increase overall test coverage from 18% to 81%, improving system reliability and QA effectiveness.

PROJECTS

- **SkillSyncAI - AI-Powered Career Intelligence Platform (React, Python, NLP, LLM APIs):**
 - Developed an AI-driven platform that analyzes user skills and profiles to generate personalized career recommendations using NLP techniques and LLM-based inference.
 - Designed a retrieval-augmented generation (RAG) pipeline to match user inputs with relevant job roles, skill gaps, and learning pathways, enabling context-aware suggestions.
 - Integrated LLM APIs to perform semantic understanding and dynamic response generation, improving recommendation relevance and enhancing user interaction.
- **SynesthAI - Music To Colour Visualizer (Python, TensorFlow/Keras, Librosa, NumPy):**
 - Developed a deep learning-based sequence modeling system using a Bi-directional LSTM to predict music-induced emotional states from audio signals.
 - Engineered high-dimensional audio features (MFCCs, chroma, spectral contrast) using Librosa to capture temporal and harmonic characteristics for robust mood classification.
 - Designed a multimodal mapping from predicted affective states to HSV color space, enabling dynamic visual representation of music and improving model consistency through hyperparameter tuning.
- **Clip-OCR - Hotkey Powered OCR Clipboard (Google Tesseract OCR Engine, pytesseract, PIL):**
 - Built a Python-based OCR system leveraging Tesseract for real-time text extraction from images, enabling seamless clipboard integration via global hotkeys.
 - Applied image preprocessing techniques (grayscale conversion, thresholding, noise reduction) to enhance OCR accuracy across diverse fonts and document conditions.
 - Designed an event-driven pipeline for screen capture and asynchronous text processing, optimizing latency and improving overall system responsiveness.

- **STierMix - Spotify Playlist Generator (HTML, CSS, JavaScript, Spotify OAuth):**
 - Developed an interactive web application that generates personalized Spotify playlists by analyzing user-input songs and leveraging recommendation logic for music discovery.
 - Integrated Spotify Web API with OAuth authentication to enable secure user login, playlist creation, and automated addition of recommended tracks to user accounts.
 - Designed a dynamic frontend using JavaScript to process user inputs and implement similarity-based recommendation techniques, enhancing personalization and user experience.
- **OpenSSH LIDS - Intrusion Detection System (Python):**
 - Developed a Python-based intrusion detection system for OpenSSH that analyzes authentication logs to detect anomalous login patterns, integrates IP geolocation for threat attribution, and triggers real-time alerts for rapid incident response.

CERTIFICATIONS

- AWS Cloud Technical Essentials by Amazon, Coursera
- Retrieval Augmented Generation(RAG) by DeepLearning.AI
- Crash Course on Python by Google, Coursera
- Introduction to HTML5 by University of Michigan, Coursera
- Modern Javascript: ES6 Essentials by Coursera

EXTRA-CURRICULAR ACTIVITIES

- Coordinated the design, production, and distribution of certificates and prizes for TechTatva '23, the national-level technical fest of Manipal Institute of Technology, ensuring accurate and timely delivery by collaborating with team members and event organizers.
- Served as a Working Committee member of the Design domain at IECSE, the official Computer Science club of MIT, actively participating in workshops and talks to gain insights into web development
- Hobbies: Playing football, guitarist, and sketching.
